Meeting #1 with sponsor – Jennifer M.

At this point we've met with the previous group, and they showed us a simple view of what they've done and their progress. Waiting for them to send us the documentation and project.

Question #1: Could you show us an idea of what you want us to do this semester, maybe give us an example if you want us to improve on what they've done so far? Complete their unfinished job, etc.

- Oh, I wasn't prepared for that
- Basically what they've done is a lot of what I asked for, just needs tweaking

- The safe job procedures that get generated by AI. That portion, it would be better if it can be produced on a form – so like a standard template, a safe job procedure template.
- They (the previous team) did have a sample, that Jennifer loved, but she doesn't think they actually implemented it.

- “The manual” is static, the business puts in a “code” (code relates to what the business “does”) and then that generates the safe job procedures that goes with the manual.
- This portion needs work: “that AI portion needs more work”

- The website itself is bland/boring. CSS styles need work. Jennifer offered to show us ideas she likes. Needs better fonts, colors.

Question #2: You want us to get a better hold of the AI sample, you said they had an AI sample before, and you want some teaks on it?

- Yeah, they had a form they were looking at (previous team wasn't sure if Jennifer liked it, but she did). Jennifer doesn't think they actually implemented it.
- Right now, when you put in a code and it generates the safe job procedures, it's just a big, long running list. It's not broken up, different procedures should be in different sections.

April 29th, 2026

- There's more stuff she would like, but she doesn't want to overdo it.

Question #3:

- New Section: Hazard Register
- Hazard assessments associated with the code (job)
- Put in the code, it gives a list of all the hazards associated with that job and all of the controls
- In a separate "one" you can do a training matrix based on the hazard assessment
- Training matrix = what does person need to start job

Are there any already-done manuals for the training matrix?

Business put in standard code

It displays sections of which hazard, what can they cause, and training matrix

Question #4: Deployment?

- Yes, Jennifer still wants to deploy it
 - She is interested in a test environment, test deployment
 - She will give us a review, and any more requirements
-
- Main issue for her is the unorganized 'form' for the safe job procedures
-
- Jennifer is more available on the weekends. Not Thursdays. Available for 1pm meetings.
 - Plan of action: work on what Jennifer has brought up first (form, hazard register, styles), put up a test deployment, Jennifer reviews, add any extras.
-
- We hope to get the test environment up fast, so Jennifer can have a better idea of what else she wants to add or change.
